

DHV EXPERIMENT 6

Name: vedant Murai

Roll no: D 64

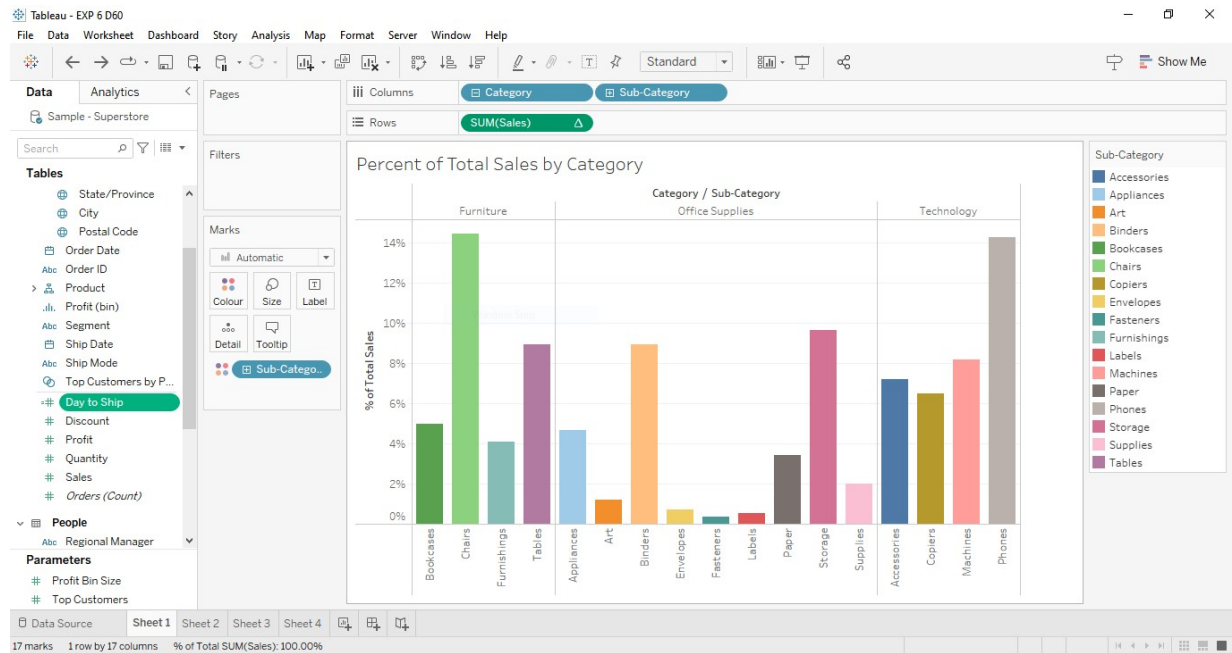

1)) Aim:

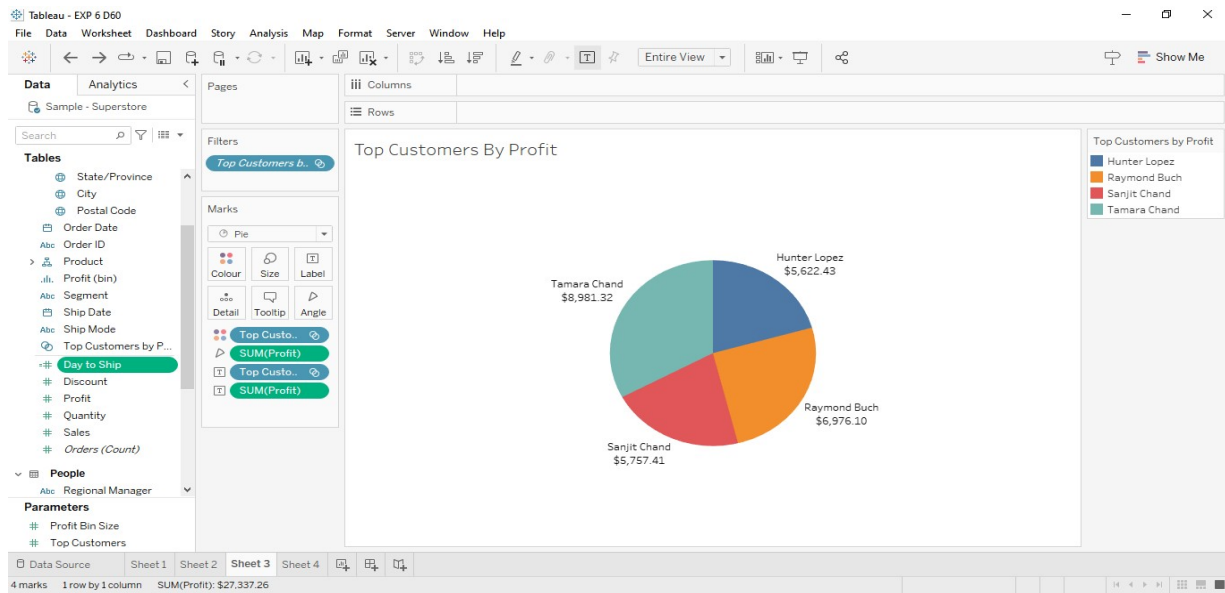

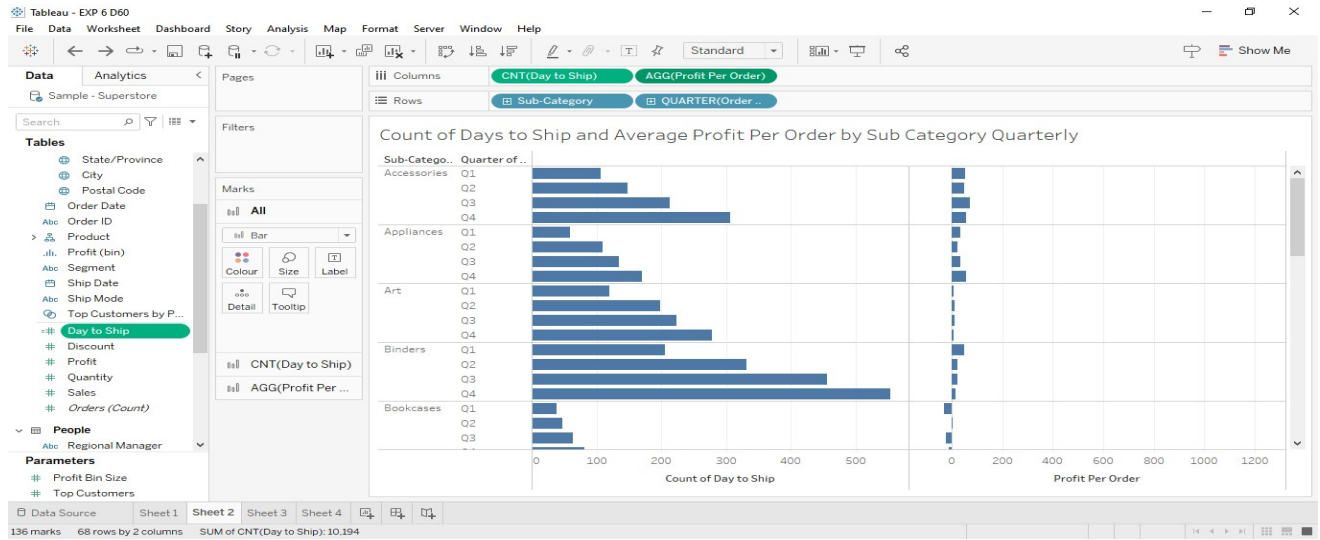

Using Tableau and show how calculated fields are created, show what are Table Calculations in Tableau and how they affect the visuals in the canvas, create sets and groups and show the differences between them.

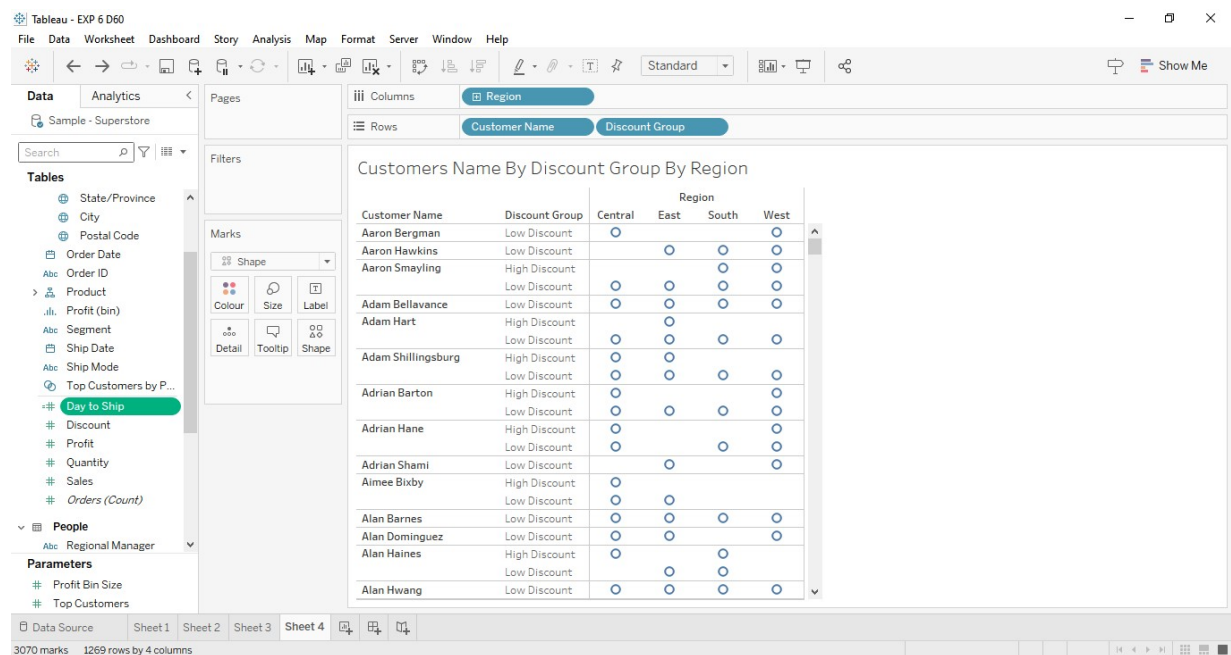

2) Solution:-

- 1) Created a Table Calculation named 'Percent of total Sales' and plotted a bar graph with Category and SubCategory as Column fields.
- 2) Create two calculated fields named 'Day to ship' and 'Profit Per Order' and plot it by subcategories on a quarterly basis.
- 3) Used set 'Top Customers By Profit' to plot a pie chart.
- 4) Created a group named 'Discount Groups' containing two members 'Low Discount' and 'High Discount' Plotted it against the 'Customer Name' field.
- 5) Both graphs of sets and groups plotted separately help us to see the difference between them.

3) Attach ss of your work like dashboard,etc.

5) Conclusion:

Tableau's calculated fields, table calculations, sets, and groups provide powerful tools for data analysis and visualization. These features allow users to derive new metrics, perform dynamic calculations, and group data based on specific criteria.
